

**X-rays:**

we are going to do the walking well X-rays in the mri waiting room. If you need an xray order it as portable. Call 3122 and they will get the patient and take them to the MRI waiting room.

**Computers:**

all the computers should have ermed on them now (we checked today and all were functional) as well as t-system.

There are 2 extra wow's in the fast track, 2 in the peds. We have 3 lap top's on the back nursing station for consultants, inpt teams, icu, etc. direct them to those computers if they are taking up space.

**Suite A/tent:**

Family practice, peds, medicine are helping to see all fast track patients that are not hypoxic in suite A or the tent. They have seen about 45-50 of our patients daily that would have been in the ED. This is a huge help. I am so happy to see them helping us out.

**Inpatient's boarding:**

a medicine resident or equivalent will be in the ED from 3-11 to take care of the patients that are admitted. Social work will be rounding on them as well.

**Flow:**

We have had to change the flow. It's become too hard to cohort the sick patients in the main ED. Peds and FT are now part of the main ER. Everyone else is going to suite A.
