

Starting March 19, 2020 clinical services will be permitted to allow resident staff to be part of the care team that cares for PUI and or positives. This should be under the following guidelines:

- Attending Supervision is mandatory for all resident activity
- It is recommended that there be as limited a number of personnel in contact with PUI or positives thus limiting this to the senior most possible residents as feasible would be safest
- Attendings will continue to be the lead care providers for these patients and residents will be essentially supportive staff.
- If your residents need training/ retraining in donning and doffing of PPE they should contact Infection control at Extn: 3923 to schedule the same.

Please contact the Office of Academic Affairs for any questions
